1 Introduction

This report generated on Sat May 29 20:15:56 2021 It is based on the 2021-05-29-07-07-01 version of the file <http://data.iana.org/TLD/tlds-alpha-by-domain.txt>.

This report uses the techniques discussed in *The Problem of Interceptor Top Level Domains Revisited* by George Markowsky that was published in *The Proceedings of the 8th IEEE International Conference on Intelligent Data Acquisition and Advanced Computing Systems: Technology and Applications* which was held 21-23 September 2017 in Bucharest, Romania. A copy of this paper is available on this website along with this report. Please consult that paper if you do not understand parts of this report.

Some basic statistics about this collection of TLDs.

The Total Number of TLDs is 1498

The Number of Distinct Prefixes is 741

The Number of Suffix Domains is 757

2 Prefixes of Each TLD That are Also TLDs

Below is an alphabetical list of TLDs showing for each TLD the TLDs that are prefixes of it. Each line contains the domain number, the number of domains that are prefixes of that domain, and then the the domain and the chain of its prefixes.

5 Prefix Chains

Below is a list of prefix chains sorted by size with the smallest chains coming first. The prefix chains show which domains might intercept other domains in case someone does not completely type all the letters of the TLD.

5.1 Prefix Chains of Length 0

The TLDs that are in the prefix chains of length 0 will not be intercepted or intercept other domains through incomplete typing. These TLDs are listed below.
